Language Reference

Arduino programming language can be divided in three main parts: functions, values (variables and constants), and structure.

FUNCTIONS

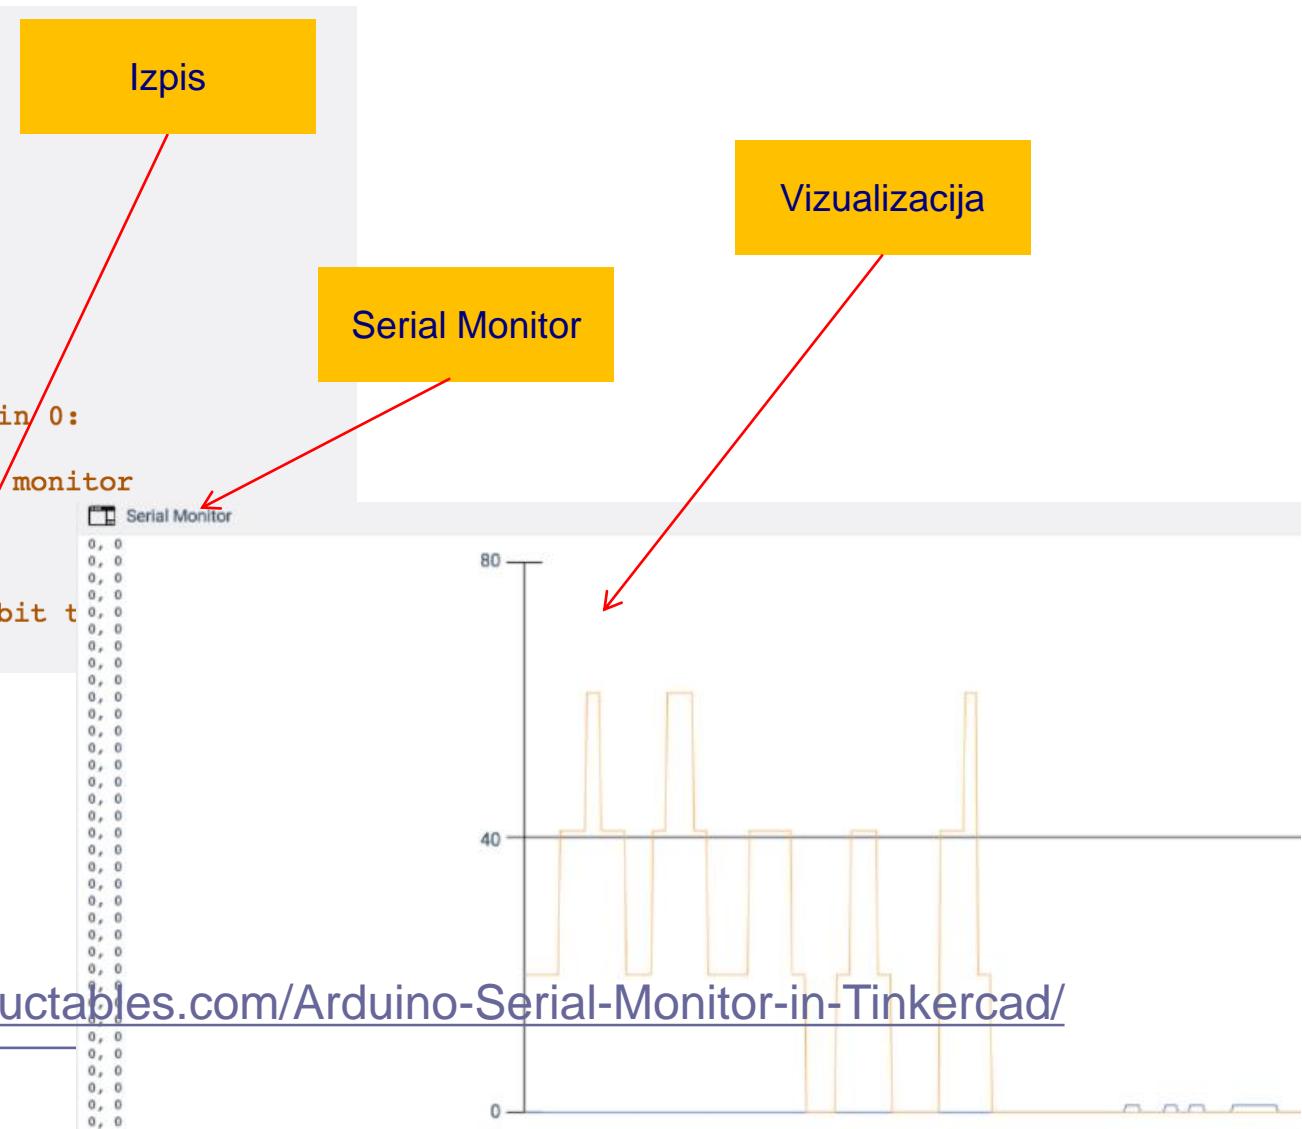

For controlling the Arduino board and performing computations.

Digital I/O	Math	Random Numbers
<code>digitalRead()</code>	<code>abs()</code>	<code>random()</code>
<code>digitalWrite()</code>	<code>constrain()</code>	<code>randomSeed()</code>
<code>pinMode()</code>	<code>map()</code>	
	<code>max()</code>	
	<code>min()</code>	
Analog I/O		Bits and Bytes
<code>analogRead()</code>	<code>pow()</code>	<code>bit()</code>
<code>analogReference()</code>	<code>sq()</code>	<code>bitClear()</code>
<code>analogWrite()</code>	<code>sqrt()</code>	<code>bitRead()</code>
		<code>bitSet()</code>

TinkerCad – Serijski izpis in vizualizacija

```
void setup()
{
  pinMode(2, INPUT);
  pinMode(A0, INPUT);
  Serial.begin(9600);
}

void loop()
{
  // read the input pin
  buttonState = digitalRead(2);
  // read the input on analog pin 0:
  sensorValue = analogRead(A0);
  // print values to the serial monitor
  Serial.print(buttonState); ↓
  Serial.print(",");
  Serial.println(sensorValue);
  delay(10); // Delay a little bit to
}
```

TinkerCad – razhroščevanje (debugging)

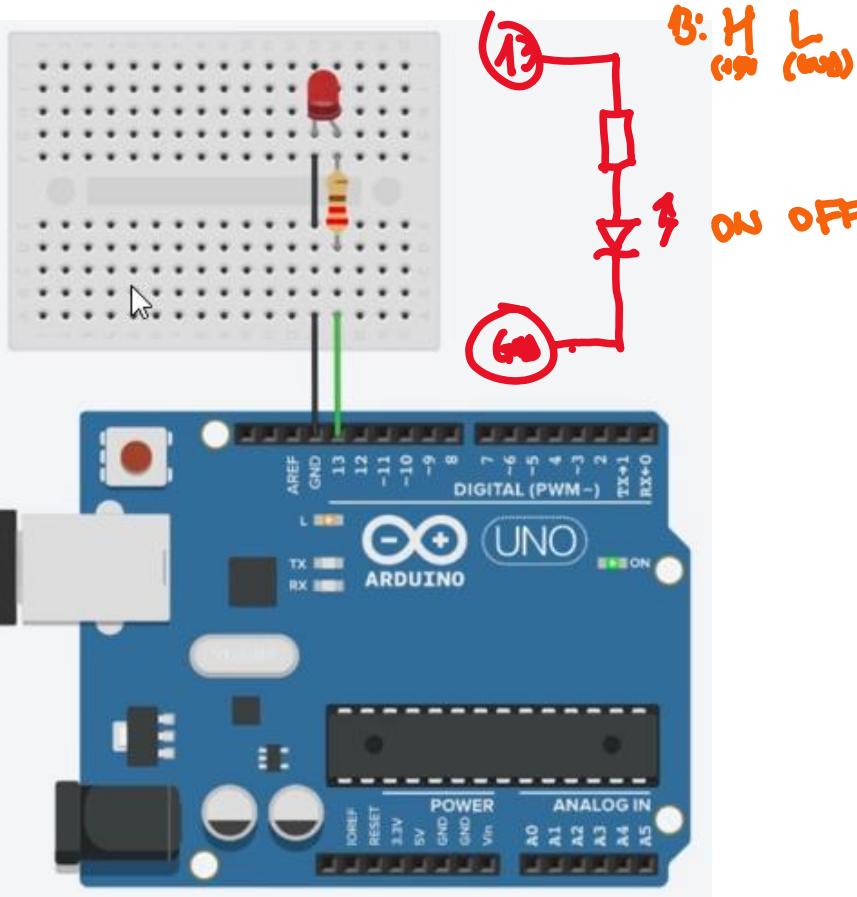

The screenshot shows the TinkerCAD interface for an Arduino sketch. The code is as follows:

```
1 int val;
2 int T;
3 void setup() {
4
5     pinMode(A0, INPUT);
6     Serial.begin(9600); // Begin the Serial at 9600 Baud
7 }
8
9
10 void loop() {
11     val = analogRead(A0);
12     //Serial.println(val);
13     T = map(val, 20, 358, 0, 165);
14     Serial.write(T);
15     delay(10);
16     //  Serial.println(val);
17 }
```

A yellow box labeled "Prekinitvev (Breakpoint)" has a red arrow pointing to the line "Serial.write(T);". A yellow box labeled "Izpis vrednosti" has a red arrow pointing to the same line. A black box with the number "153" is placed over the line "delay(10);".

Preprosto vezje z LED diodo in program

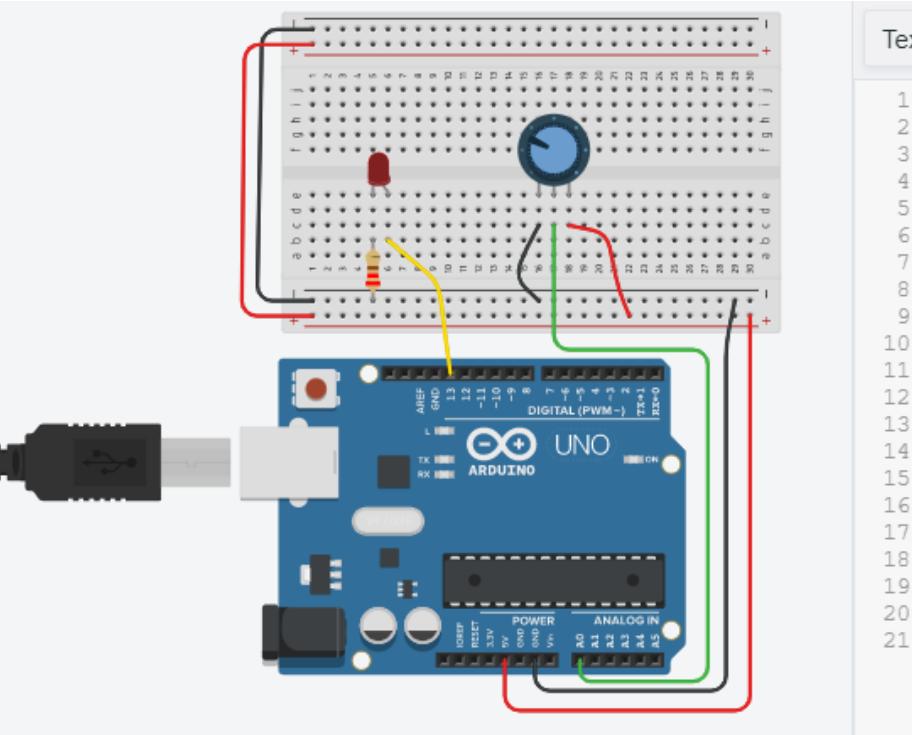

```
hello_world
1 /*
2  This program blinks pin 13 of the Arduino (the
3  built-in LED)
4 */
5
6 void setup()
7 {
8     pinMode(13, OUTPUT);
9 }
10
11 void loop()
12 {
13     // turn the LED on (HIGH is the voltage level)
14     digitalWrite(13, HIGH);
15     delay(1000); // Wait for 1000 millisecond(s)
16     // turn the LED off by making the voltage LOW
17     digitalWrite(13, LOW);
18     delay(1000); // Wait for 1000 millisecond(s)
19 }
```

<https://www.tinkercad.com/things/lIkRDbp1u2C>

Preprosto vezje z LED diodo

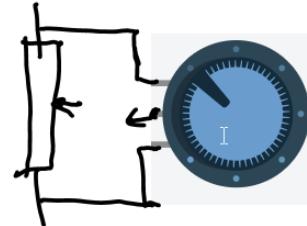

■ Vezje z uporovnim „tipalom“ (potenciometrom) - ADC

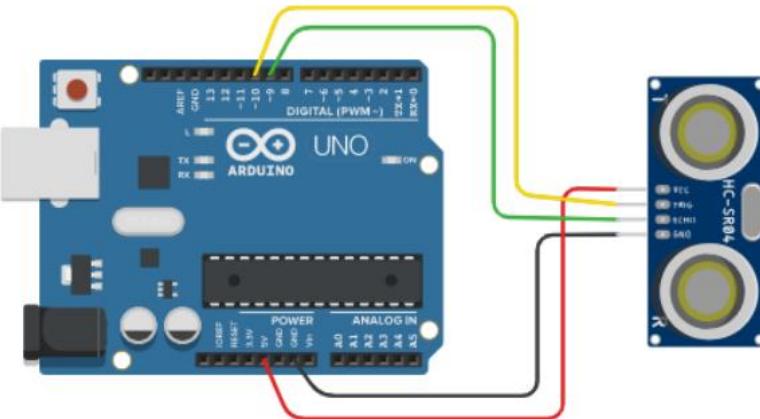

```

1 int sensorValue = 0;
2
3 void setup()
4 {
5     pinMode(A0, INPUT);
6     pinMode(13, OUTPUT);
7 }
8
9 void loop()
10 {
11     // read the value from the sensor
12     sensorValue = analogRead(A0);
13     // turn the LED on
14     digitalWrite(13, HIGH);
15     // pause the program for <sensorValue> milliseconds
16     delay(sensorValue); // Wait for sensorValue millisecond(s)
17     // turn the LED off
18     digitalWrite(13, LOW);
19     // pause the program for <sensorValue> milliseconds
20     delay(sensorValue); // Wait for sensorValue millisecond(s)
21 }

```

■ Preprosto vezje z UZ tipalom – Časovník (Timer)

```

How to Use and Understand the Arduino Reference (neobvezno)

The screenshot shows a Chrome browser window with the following details:

- Address Bar:** https://opensourcehardwaregroup.com/how-to-use-and-understand-the-arduino-reference/
- Toolbar:** Shows various browser icons and a search bar.
- Header:** STEP 3: Creating the Video, How to Use and Understand the Arduino Reference, Arduino - Reference.
- Post Content:**
 - # How to Use and Understand the Arduino Reference
 - May 22, 2014 | Arduino Tutorials | Edit
 - So you just opened up your fancy new gadget – maybe an awesome DSLR camera, or the newest gaming system, or maybe a new Blu-ray player. As you gladly tear away the packaging – you notice a small book that feels like it was printed on 4th generation recycled newspaper – it's the instruction manual.
 - As you skim the pages you realize it was first written in Japanese, translated to Chinese by an Australian ventriloquist and then an intern in California used Google Translate to finish the job for your native tongue.
 - So you toss the instruction manual and just plug the gadget in. Good for you – especially since it appears as everything is working just fine.
- Video Player Controls:** A video player interface at the bottom shows a progress bar (0:14 / 12:47), volume control, and other standard video controls.
- Icons:** A red gear icon with a bell symbol is visible on the right side of the post content area.

TinkerCad – Domača naloga 2-2:

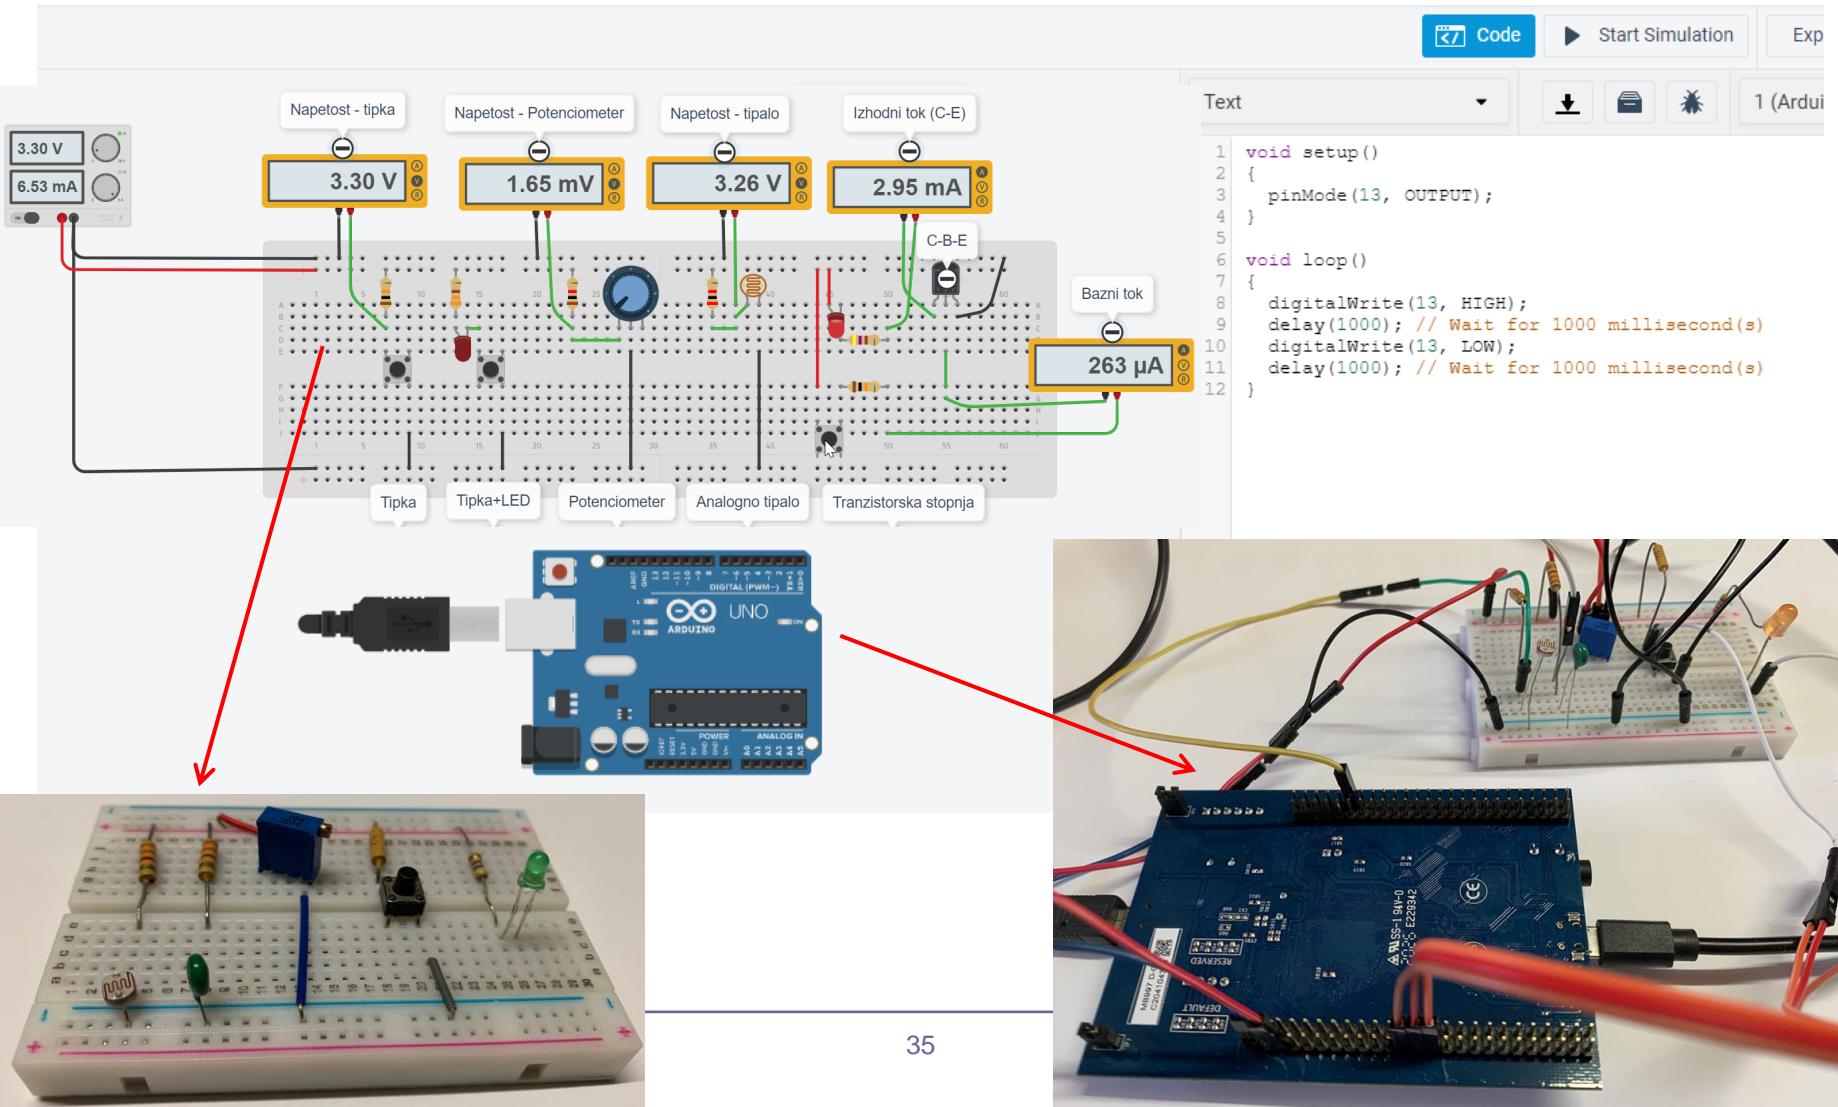

The screenshot shows a breadboard simulation setup in TinkerCad. On the left, there's a power source (3.30 V) and a current meter (6.53 mA). The circuit consists of several components connected via green wires on a grey breadboard grid. Labels for components include: Napetost - tipka, Napetost - Potenciometer, Napetost - tipalo, Izhodni tok (C-E), Tipka, Tipka+LED, Potenciometer, Analogno tipalo, Tranzistorska stopnja, and Bazni tok. A red wire connects the power source to the breadboard. A blue potentiometer is connected between pins 10 and 20. A red LED is connected between pin 15 and ground. A blue transistor is connected between pins 25 and 40. A red resistor is connected between pin 40 and ground. A green wire connects the collector terminal (C-B-E) of the transistor to the base terminal (Bazni tok) of another transistor. The base of this second transistor is connected to the output of the analog voltage divider (Analogno tipalo). The collector of this second transistor is connected to the Arduino Uno's digital pin 13. The Arduino Uno board is shown at the bottom, with its pins labeled. The breadboard has columns labeled A through J and rows labeled 1 through 60. On the right side of the interface, there are buttons for 'Code' (with a blue icon), 'Start Simulation' (with a play icon), and 'Exp' (with a gear icon). Below these are icons for download, file, and help. The code window shows the following Arduino sketch:

```

1 void setup()
2 {
3   pinMode(13, OUTPUT);
4 }
5
6 void loop()
7 {
8   digitalWrite(13, HIGH);
9   delay(1000); // Wait for 1000 millisecond(s)
10  digitalWrite(13, LOW);
11  delay(1000); // Wait for 1000 millisecond(s)
12 }

```
